### Fund manager's commentary

Monetary policy turned more hawkish in response to inflation data above central bank targets as a result of higher prices for a broadening range of goods and services. The Bank of England raised interest rates to 0.25% and the Federal Reserve accelerated the rundown of quantitative easing and pencilled in three rate rises for 2022. Global bonds fell 2.46% in sterling. In the UK, government bonds and investment-grade corporate bonds fell 2.64% and 1.12% respectively but high-yield bonds rose 0.66%. The EF Brompton Global Growth Fund's bond investments rose because of their holdings in short-dated and inflation-linked bonds. Schroder Strategic Credit and the sterling-hedged PIMCO Global Low Duration Real Return holding returned 0.69% and 0.54% respectively. Global equities rose 1.62% in sterling as data suggested the Covid-19 Omicron variant might be less severe than feared. US stocks rose 2.06% in sterling despite the technology sector's 0.72% fall. Polar Capital Global Technology and Vulcan Value Equity suffered from sector weakness, falling 3.05% and 2.00% respectively. UK stocks gained 4.81% and small companies outperformed, rising 4.99%, because of the UK's bias towards cyclical sectors. Within the portfolio, Man GLG Undervalued Assets did best, rising 6.44%, while Chelverton UK Equity Growth was the only laggard, gaining 4.25%. Among the equity holdings in Asia excluding Japan and emerging markets, pan-regional investments underperformed, with Baillie Gifford Pacific weakest, down 3.57%. Goldman Sachs India Equity bucked the trend, however, gaining 2.70%. The EF Brompton Global Growth Fund rose 1.03%† in December while the sector rose 1.56%.

## Investment policy

The Fund will typically invest a minimum of 80% of its net asset value in collective investment schemes, exchange traded funds, unregulated collective investment schemes, and may also include transferable securities (including investment trusts and similar instruments), money-market instruments, fixed income instruments, deposits and foreign exchange contracts.

It is expected that exposure to equity markets will typically range from a minimum of 40% to a maximum of 85% of the total Fund, with the aim of achieving the Fund's objective. However, investments will not be confined by industrial, economic or geographical sector.

The Fund may also hold, on a temporary basis, all or part of its assets in cash or other ancillary liquid assets.

The Fund may utilise derivatives for the purposes of efficient portfolio management (typically hedging, including investing in hedged share classes, which attempts to mitigate against falls in the value of the Fund's assets and the effects of changes in currency exchange rates against the Fund's base currency, which is pounds sterling).

The Fund's benchmark is IA Mixed Investment 40-85% Shares. This represents a comparator benchmark because the Fund's performance can be compared to funds which also sit within this industry sector.
